Pack Expo, Las Vegas, Sept 10-12, 2001, Booth #6940

**New Zero-Max Servo Class Coupling Brochure Published –
Two Styles in Single and Double Disc Models Available**

Call 763-546-4300 for Free Copy

Plymouth, Minnesota: A new Zero-Max catalog of Servo Class couplings in single disc SD and double disc SC models has been published. This expanded line of high performance couplings is designed to meet the precision positioning requirements and high reverse-load characteristics common to many of today's servomotor applications.

System designers will find this new catalog a real help in evaluating options and sizes for specific servomotor applications. SD models provide a smaller package with higher torsional and axial stiffness. SC models provide greater parallel and axial misalignment capability. Both models have zero backlash, low inertia with a greater coupling torsional stiffness operating range to avoid system resonance in most applications.

Available in eight sizes with torque ratings from 8.85 to 885 in. lbs., the couplings are available with clamp style hubs with either inch, metric or combination bores. Bore sizes range from 0.1875 inch to 1.375 inch or from 4 mm to 35 mm.

Included in the brochure are complete selection information and reference for ordering a CD ROM with Zero-Max Sizing and Selection software. The CD ROM gives the designer the Servo Class Catalog in PDF format, a comprehensive sizing and selection program, and CAD drawings for the couplings.

Call 763-546-4300 for FREE Servo Class brochure or CD ROM with sizing software included.

Or write to Zero-Max, 13200 Sixth Avenue North, Plymouth, Minnesota 55441-5509.
